

MACROLUX 95

MACROLUX 95 +2, +1 and +0.5 optics offer cinematographers and lens owners a creative way to get different looks and extend the performance of prime, zoom and anamorphic lenses with 95 mm front diameters.

NEW LOOKS FOR EXISTING LENSES

The MACROLUX 95 diopters gives cinematographers the option of creating various new looks from existing lenses with the turn of a screw. The MACROLUX 95 clamps quickly and securely to any lens with a 95mm front diameter. They are so secure that more than one can be stacked for greater effect and clamp-on matteboxes can still be used. It can even be used with anamorphic lenses.

SHOOTING WIDE AND CLOSE FOCUS

The high quality glass used in the MACROLUX 95 allows it to be used on wide-angle lenses without inducing distortion or image degradation. This offers increased close focus ability while also increasing the out of focus effect and background separation. It can be used for extreme close ups as well as maintaining a consistent depth of field look between wider and longer lenses.

CLOSE FOCUS CHANGE

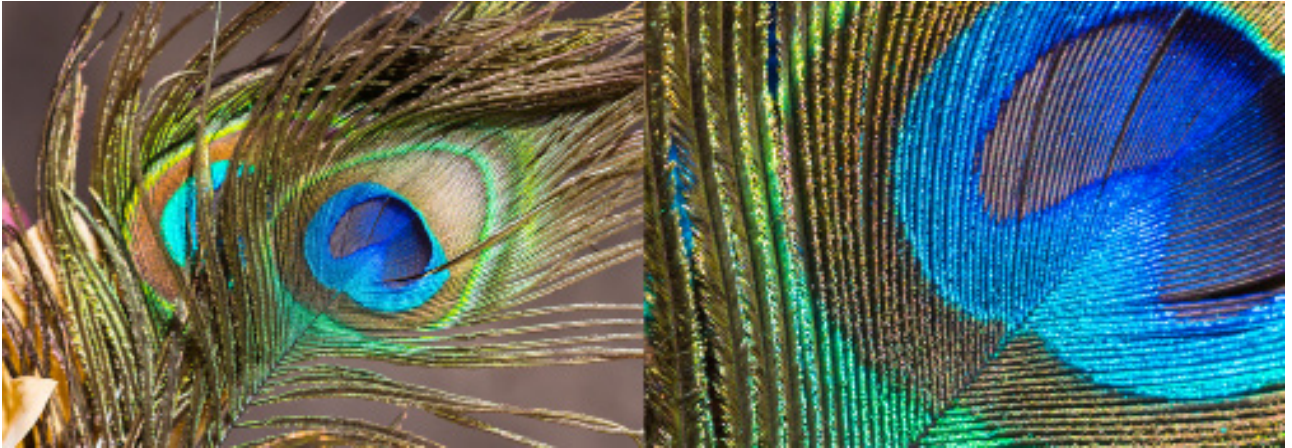

Using the MACROLUX 95 with telephoto lenses offers the option for creating and inserting macro shots that maintain the consistent look and feel of the rest of the content. The +1 allows 33% closer focus with a 100 mm lens and a 50% closer focus with a 135 mm.

PROFILE

Diopter	+0.5	+1	+2
Compatibility	All existing lenses until a 95 mm front diameter		
Weight (lb)	1.1	1	1.05
Weight (g)	480	450	470

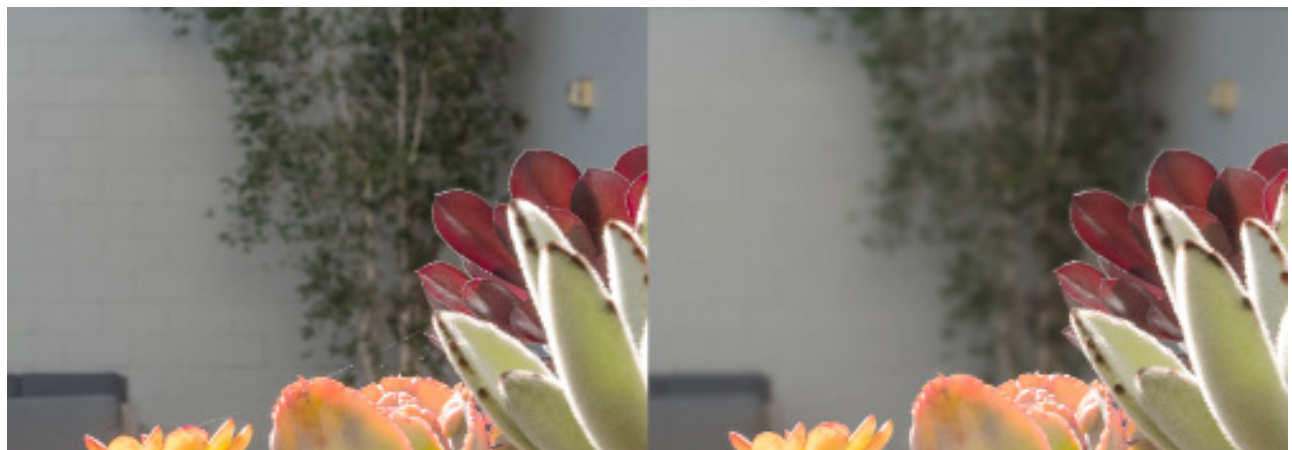

MACROLUX 95

Capture incredible detail with no loss of performance and additional color fringing.

Increase out of focus features and background separation when using wider lenses and higher T-stops.

Organic focus fall off and smooth out of focus elements.
